

Matthew Bowyer

Analytics and Data Science Manager

matthewmbowyer@gmail.com | Gauteng, South Africa | <https://www.linkedin.com/in/matthew-bowyer-535a6818a> | <https://github.com/MatthewMBowyer>

Profile

Analytics and Data Science Manager with 7+ years across analytics, business intelligence, financial analysis, data science, machine learning and reporting automation. Leads global analytics, data science and applied AI delivery across 29 countries, with regular engagement with C-suite leadership. Combines leadership with hands-on delivery across Python, SQL, predictive and prescriptive analytics, statistical modelling, feature engineering, MLOps and GenAI. Proven track record of productionising analytical workflows, governing reusable data and ML assets, and delivering decision support across millions of devices, SIMs and customer records.

Experience

Manager: Data Analytics & Global Reporting

Cartrack · Jun 2024 – Present · South Africa

Leads global analytics, reporting automation, data science, machine learning and applied AI delivery across 29 countries and major business functions including sales, finance, marketing, operations, telematics and R&D.; Leads predictive and prescriptive analytics, forecasting, anomaly detection and decision-support across datasets spanning millions of devices, SIMs and customer records; owns ML lifecycle activities including experimentation, validation, tuning, calibration and model monitoring; productionises business-critical analytics and ML workflows, replacing multi-day manual processes with unattended execution.

SIM Usage Analyst

Cartrack · Jan 2024 – May 2024 · South Africa

Analysed global SIM usage, device health, firmware performance and operational trends across Cartrack's international fleet, using large operational datasets to support issue prioritisation and decision-making. Performed exploratory analysis, anomaly detection and trend analysis, and improved visibility into fleet, connectivity and device health through repeatable analytical reporting and data-quality checks.

Data Scientist

Greendoor Group · Mar 2023 – Jan 2024 · South Africa

Led analytics, data science and machine learning initiatives across Greendoor Group and its African subsidiaries, supporting operational, financial, fleet and executive decision-making. Built predictive and prescriptive models and production-oriented analytical solutions using Python, MySQL, Tableau and AWS-based data pipelines, and applied model monitoring, governance and decision-science practices.

Data Analyst

Smith Yong and Associates · Jan 2019 – Feb 2023 · Gauteng, South Africa

Supported audit, financial analysis, inventory verification and data quality initiatives through structured reporting and analysis. Analysed financial and operational records to support audit and business review processes, led physical inventory verifications, and cleaned, validated and improved datasets to support reliable analysis and decision-making.

Leadership & Additional Achievements

Vice Chairman & Athlete Representative

Gauteng Weightlifting Association · Feb 2025 – Present

Elected to represent athlete interests and work with the association executive on athlete development, competition planning and strategic improvements. Serves as a liaison with the South African Weightlifting Federation.

Executive Committee Member

Gauteng Weightlifting Association · Jul 2023 – Feb 2025

Initiated and managed automated tracking and uploading of technical official statistics, improving the timeliness and accuracy of federation records, and supported automation of athlete and event record tracking, website maintenance and technical operations.

South African Presidents Team Representative

RLSS Commonwealth Festival of Lifesaving · 2019 · Leeds, UK

Represented South Africa in Leeds, UK; won an individual silver medal with a provincial record and contributed to two team medal finishes.

Education

MSc Data Science

University of Essex Online · Completed · Jan 2024 – Jun 2026 · Merit

Taught modules in research methods and professional practice, machine learning, deciphering big data, visualising data, the data professional and numerical analysis. Thesis: A Multimodal Driver Behaviour Evaluation System: Combining Telematics, VLMs and LLMs.

BSc (Hons) Data Science

The Open University · Completed · Mar 2020 – Jul 2023

Twelve 30-credit modules grounding statistics, mathematics, computing, algorithms and machine learning. Evidenced by the module pages in this portfolio.

Core Capabilities

Leadership & Strategy. Analytics strategy, data strategy, AI/ML capability building, executive decision support, stakeholder management, cross-functional delivery, mentoring.

Data Science & AI. Python, SQL, machine learning, statistical modelling, predictive and prescriptive analytics, decision science, optimisation, feature engineering and selection, experimentation, hypothesis testing, model validation, tuning, calibration, performance benchmarking, GenAI, LLMs, RAG, VLMs.

Engineering & Platforms. Databricks, MLflow, Spark, PySpark, Delta Lake, Feature Store, MLOps, ETL/ELT, data pipelines, data modelling, model monitoring and drift, data and model governance, data quality, lineage, AWS, MySQL, Tableau.

Selected projects

Essex MSc Data Science Thesis. Multimodal driver behaviour evaluation combining telematics data, vision-language models and large language models.

UoEOMScDataScience e-portfolio. The University of Essex Online MSc e-portfolio - the body of academic work this site presents.

Pringle Padel. Company website for a client, built to present the business, its services and its brand.

The Bowyer Collective. Photography portfolio website for Chloe's Photography.

Chloe's Travelling Tutors. Business website presenting tutoring services to prospective clients.

Padel Scraper. Python web-scraping system collecting padel results and transforming them into structured JSON (private repository).

Selected academic artefacts

The full academic body of work — module pages and the reports, literature reviews, presentations, dashboards and statistical worksheets produced across the programme — is published on the portfolio site this CV accompanies. Every artefact named below is reachable from that site's Evidence surface.

Literature review — machine learning for churn prediction in telematics. A 13-page literature review produced for Research Methods and Professional Practice.

MSc Computing Project — multimodal driver behaviour evaluation. Dissertation combining telematics data, vision-language models and large language models.

Unit 12 — Final Project. A 20-page ticket-team dashboard manual produced for Visualising Data.

Unit 6 — Database design for a ride-hailing company. A full logical database design and implementation report.

Every statement in this CV traces to the supplied portfolio site, the supplied academic artefacts, or the LinkedIn profile linked above. No number, employer, date, metric or credential is asserted that those sources do not evidence.
